

Requirements for the Machine Communication workshop:

- Install NodeJS (latest LTS) in your machine: <https://nodejs.org/en>
- Verify that it got correctly installed by opening a terminal and typing **node --version**: the version number should appear.
- Install Nodemon: in that same terminal, type **npm install -g nodemon**. If you now type **nodemon --version**, you should get the version number.
- Install a version of Chrome with CORS disabled. Follow the instructions on <https://alfilatov.com/posts/run-chrome-without-cors/> for your operating system.
